#### TRAINITY DATA ANALYTICS PROJECT-3

# OPERATION ANALYTICS AND INVESTIGATING METRIC SPIKE USING ADVANCED SQL

#### PROJECT DESCRIPTION:

The aim of this project is to examine the patterns of multinational product users in terms of their interactions with fellow users and the frequency of their engagement with their accounts. This evaluation yields valuable and practical knowledge to the multinational product teams, which can be utilized to anticipate and project the future developments of the product. By utilizing diverse database management tools, we can extract informative insights from the raw data and even visualize them, thereby paving the way for optimizing the platform's efficiency.

#### **APPROACH:**

The first step in commencing the project is to analyze the provided datasets and gain a clear understanding of the relationships between the columns in each dataset. After this, we will create a database and import the CSV files into the datasets. Finally, we will utilize SQL queries to extract and organize the data, enabling us to retrieve the necessary insights and information required to respond to inquiries from the management team and investors regarding the metrics of the multinational product.

#### **INSIGHTS:**

My experience working on the project gave me valuable insights into how advanced SQL techniques can be used to effectively extract insights from the database. Through the use of advanced SQL, I was able to conduct operational analytics and investigate metric spikes, enabling me to identify trends and patterns in the data.

#### **TECH-STACK USED:**

Mysql workbench

#### Case Study 1 (Job Data):

1A)Calculate the number of jobs reviewed per hour per day for November 2020?

## **SQL QUERY:**

SELECT ds AS Date ,ROUND(COUNT(job\_id)/SUM(time\_spent)\*3600) AS Total\_Job\_Reviews FROM job\_data GROUP BY 1;

# **QUERY OUTPUT:**

Date	Total_Job_Reviews
2020-11-30	180
2020-11-29	180
2020-11-28	218
2020-11-27	35
2020-11-26	64
2020-11-25	80

# 1B)Calculate 7 day rolling average of throughput? For throughput, do you prefer daily metric or 7-day rolling and why?

#### **SQL QUERY:**

WITH grp AS (SELECT ds, COUNT(job\_id) AS num\_jobs, SUM(time\_spent) AS total\_time FROM job\_data GROUP BY ds) SELECT ds AS DATE , ROUND(1.0\*SUM(num\_jobs) OVER (ORDER BY ds ROWS BETWEEN 6 PRECEDING AND CURRENT ROW) / SUM(total\_time) OVER (ORDER BY ds ROWS BETWEEN 6 PRECEDING AND CURRENT ROW),2) AS Rolling\_average\_for\_7days FROM grp;

DATE	Rolling_average_for_7days
2020-11-25	0.02
2020-11-26	0.02

2020-11-27	0.01
2020-11-28	0.02
2020-11-29	0.02
2020-11-30	0.03

In MySQL, daily metrics and rolling average are both useful in analyzing system performance and making decisions about resource allocation and optimization. Daily metrics provide a snapshot of performance over a fixed time period, while rolling average offers a more flexible and up-to-date view of trends over a sliding time window. The preferred approach depends on the specific use case and the insights required from the data.

# 1c)Calculate the percentage share of each language in the last 30 days.

## **SQL QUERY:**

SELECT language,(100\*COUNT(language)/TOTAL) AS Percentage FROM job\_data CROSS JOIN (SELECT COUNT(\*) AS TOTAL FROM job\_data WHERE ds BETWEEN '2020-11-30' - INTERVAL 30 DAY AND '2020-11-30') as tb GROUP BY 1;

## **QUERY OUTPUT:**

Language	Percentage
English	12.5000
Arabic	12.5000
Persian	37.5000
Hindi	12.5000
French	12.5000
Italian	12.5000

1D)Let's say you see some duplicate rows in the data. How will you display duplicates from the table?

#### **SQL QUERY:**

WITH TAB AS (SELECT \*, ROW\_NUMBER() OVER (PARTITION BY ds,job\_id,actor\_id,event,language,time\_spent,org) AS row\_num FROM job\_data )SELECT \* FROM TAB WHERE row num>1;

#### **QUERY OUTPUT:**

There are no duplicate in this table

Case Study 2 (Investigating metric spike):

2A) Calculate the weekly user engagement?

# **SQL QUERY:**

SELECT WEEK(occurRed\_at) AS Week,COUNT(user\_id) AS No\_of\_users FROM events WHERE event type='engagement' GROUP BY 1 ORDER BY 1;

Week	No_of_users	
17	8019	
18	17341	
19	17224	
20	17911	
21	17151	
22	18413	
23	18280	
24	19052	
25	18642	

26	19061
27	19881
28	20776
29	20067
30	21533
31	18556
32	16612
33	16145
34	16127
35	784

# 2B)Calculate the user growth for product?

# **SQL QUERY:**

WITH CTE AS (SELECT MONTH(created\_at) as MONTH,COUNT(user\_id) AS USERS FROM users GROUP BY 1)SELECT MONTH,USERS,ROUND((USERS/LAG(USERS,1) OVER (ORDER BY MONTH)-1)\*100,2) AS G Growth\_Percent FROM CTE;

MONTH	USERS	Growth_Percent
1	1415	
2	1382	-2.33
3	1614	16.79
4	1829	13.32
5	2083	13.89

6	2213	6.24
7	2591	17.08
8	2626	1.35
9	699	-73.38
10	826	18.17
11	816	-1.21
12	972	19.12

# 2C)Calculate the weekly retention of users-sign up cohort? SQL QUERY:

SELECT first week,

SUM(CASE WHEN week\_number = 0 THEN 1 ELSE 0 END) AS Week\_0,
SUM(CASE WHEN week\_number = 1 THEN 1 ELSE 0 END) AS Weeek\_1,
SUM(CASE WHEN week\_number = 2 THEN 1 ELSE 0 END) AS Week\_2,
SUM(CASE WHEN week\_number = 3 THEN 1 ELSE 0 END) AS Week\_3,
SUM(CASE WHEN week\_number = 4 THEN 1 ELSE 0 END) AS Week\_4,
SUM(CASE WHEN week\_number = 5 THEN 1 ELSE 0 END) AS Week\_5,
SUM(CASE WHEN week\_number = 6 THEN 1 ELSE 0 END) AS Week\_6,
SUM(CASE WHEN week\_number = 7 THEN 1 ELSE 0 END) AS Week\_7,
SUM(CASE WHEN week\_number = 8 THEN 1 ELSE 0 END) AS Week\_8,
SUM(CASE WHEN week\_number = 9 THEN 1 ELSE 0 END) AS Week\_9,
SUM(CASE WHEN week\_number = 10 THEN 1 ELSE 0 END) AS Week\_10,
SUM(CASE WHEN week\_number = 11 THEN 1 ELSE 0 END) AS Week\_11,
SUM(CASE WHEN week\_number = 11 THEN 1 ELSE 0 END) AS Week\_11,
SUM(CASE WHEN week\_number = 12 THEN 1 ELSE 0 END) AS Week\_11,

SUM(CASE WHEN week\_number = 13 THEN 1 ELSE 0 END) AS Week\_13,

SUM(CASE WHEN week\_number = 14 THEN 1 ELSE 0 END) AS Week\_14,

SUM(CASE WHEN week\_number = 15 THEN 1 ELSE 0 END) AS Week\_15,

SUM(CASE WHEN week\_number = 16 THEN 1 ELSE 0 END) AS Week\_16,

SUM(CASE WHEN week\_number = 17 THEN 1 ELSE 0 END) AS Week\_17,

SUM(CASE WHEN week\_number = 18 THEN 1 ELSE 0 END) AS Week\_18,

SUM(CASE WHEN week\_number = 19 THEN 1 ELSE 0 END) AS Week\_19

FROM (SELECT a.user\_id,a.login\_week,b.first\_week as first\_week,a.login\_week-first\_week as week\_number FROM (SELECT user\_id,week(occurred\_at) AS login\_week FROM events GROUP BY user\_id,week(occurred\_at)) a,(SELECT user\_id, min(week(occurred\_at)) AS first\_week FROM events GROUP BY user\_id) b where a.user\_id=b.user\_id) as with\_week\_number group by first\_week order by first\_week;

#### **RESULT:**

Overall, my experience working with SQL during the project proved to be an invaluable skill, as it enabled me to derive insightful information and make informed decisions based on the data. The expertise I gained in this area will undoubtedly benefit me in future projects and analysis work.
